
Using the font FF Dingbests with LaTeX

September 22, 2004

Walter Schmidt

<w-a-schmidt@gmx.net>

The symbol font FF Dingbests, version 004.460, is assigned the LaTeX family name `dingbests` and the encoding `U`. The symbols can be used through the command `\Pisymbol` of the package `pifont`:

```
\usepackage{pifont}
```

```
...
```

```
\Pisymbol{dingbests}{<code>}
```

`<code>` is the slot of the particular symbol in the font; see the below table. For instance, `\Pisymbol{dingbests}{117}` prints ✖.
